

Training resource system

The training resource system (TRS) serves as an open educational resource (OER) and ensures that important basic knowledge is documented. The TRS provides assignments, tasks, and material, allowing the preparation and follow-up work on the subject matter to be performed independently of place and time.

Please note that we must change some regular training programme parts for running our summer school as an online event in 2021. Thus, our Training Resource System will not serve as the six-week training program's compulsory schedule.

The current concept can be found here for download.

To discover our GeoTraining-OER follow this link.
